

# CalVTP MMRP Implementation Tools

## Special-Status Wildlife Measures Flow Chart

Is implementation of spatial avoidance (buffers around suitable habitat) or temporal avoidance (limited operating periods in suitable habitat) feasible to avoid impacts to the special-status species (See MMRP project-specific measures for **SPR BIO-1**)?

**Yes**

Refer to project-specific measures for **SPR BIO-1**

**No**

Conduct focused or protocol-level surveys for special-status wildlife (**SPR BIO-10**), or assume that the species is present:

**Limited Operating Period**

Implement limited operating periods for wildlife (See "Biological Resources Sensitive Season Limited Operating Periods" Chart tool; MMRP project-specific measures under **SPR BIO-1**)

**Spatial Avoidance**

Implement no-disturbance buffers (See MMRP project-specific measures under **SPR BIO-1**) (e.g., 200 feet of foothill yellow-legged frog stream habitat):

- Insert avoidance measurement and biological resource to avoid
- Insert avoidance measurement and biological resource to avoid

- Insert special-status species name
- Insert special-status species name
- Insert special-status species name
- Insert special-status species name
- Insert special-status species name
- Insert special-status species name
- Insert special-status species name
- Insert special-status species name
- Insert special-status species name
- Insert group of special-status species (e.g., special-status bats)

**Spatial or temporal avoidance OR survey results negative:**

Proceed with treatment<sup>1</sup>. Measures to maintain habitat function for special-status wildlife may be required.

**Survey results positive or species assumed present:**

Identify mitigation measure(s) listed below that apply to species

**Implement MM BIO-2a**

- Insert special-status species name
- Insert special-status species name
- Insert special-status species name
- Insert special-status species name
- Insert special-status species name

**Implement MM BIO-2b**

- Insert special-status species name
- Insert special-status species name
- Insert special-status species name
- Insert special-status species name
- Insert special-status species name

**Implement MM BIO-2d through 2h**

- Insert special-status species name
- Insert special-status species name

<sup>1</sup> Proceed with treatment in compliance with other applicable measures.
